

# Download Contemporary Diagnosis And Management Of The Post-mi Patient

Cardiovascular. Management of Dyslipidemia The importance of treating dyslipidemias based on cardiovascular risk factors is highlighted by the National Cholesterol Education Program guidelines. The CRUSADE Score risk stratifies patients with NSTEMI who are undergoing anticoagulation to determine their risk of bleeding. INTRODUCTION. Patients with acute mitral regurgitation (MR) are often gravely ill with significant hemodynamic abnormalities that require urgent medical and usually surgical treatment. The pathophysiology, clinical features, and management of native acute MR will be reviewed here. 2019, Volume 26, Issue 1, pages 1–40 Editorials Clinical articles News and views Topics include: -Manage frailty effectively or manage decline; Low anticoagulant prescribing in stroke and atrial fibrillation
