

Download Human Origins And Environmental Backgrounds

Environmental history is the study of human interaction with the natural world over time, emphasising the active role nature plays in influencing human affairs and vice versa. A race is a grouping of humans based on shared physical or social qualities into categories generally viewed as distinct by society. First used to refer to speakers of a common language and then to denote national affiliations, by the 17th century the term race began to refer to physical (phenotypical) traits. Environmental Studies offers an interdisciplinary approach to the complex relationships between humans and the natural and built environment. The Environmental Studies curriculum includes the natural and social sciences, as well as the humanities. Earth and life sciences provide the means to observe and assess environmental change. Human gut microbiome composition is shaped by multiple factors but the relative contribution of host genetics remains elusive. Here we examine genotype and microbiome data from 1,046 healthy ...
