

Download Lighting Design In Buildings

The hospital functions around the clock and year-round, its patients can range from premature infants to the elderly, and its occupants can include very ill patients or workers and visitors who are in good health. At Stantec, we use lighting design to create distinct visual identities, changing how people experience a space. Come see how. Architecture: Probably the largest impacts on electric lighting requirements and design come from the architectural orientation, massing, ceiling height, and section profiles that determine daylight availability in the building. Projects from 18 countries – including Korea, India, Australia, Norway, Sweden, the US, the UK, France, Spain, Germany, the UAE, Switzerland and Greece – have been recognised and rewarded at the forty-second Lighting Design Awards in London.
