In mathematical optimization, Dantzig's simplex algorithm (or simplex method) is a popular algorithm for linear programming. The name of the algorithm is derived from the concept of a simplex and was suggested by T. S. Motzkin. Simplices are not actually used in the method, but one interpretation of it is that it operates on simplicial cones ...Algorithms for LP Models. It is easy to create general but hard-to-use solution algorithms, and it is easy to create easy-to-use but specialized solution algorithms. Optimization techniques are used to find a set of design parameters or decisions that give the best possible result. An optimization problem is a model of a design or decision problem.
