

# Download Mechanics Of Poroelastic Media

Poromechanics is a branch of physics and specifically continuum mechanics and acoustics that studies the behaviour of fluid-saturated porous media. Professor Atul Bhaskar PhD Professor of Applied Mechanics. Dr Atul Bhaskar is Professor of Applied Mechanics in the Computational Engineering and Design Group within Engineering and Physical Sciences at the University of Southampton. A joint research unit UMR5259 of the INSA de Lyon and the CNRS, the role of LaMCoS is to carry out research on understanding and controlling the behavior of mechanical structures and systems by studying their interfaces. An email will be sent with a link containing all accessible PDF files. Email: (required)
