In economics and political science, fiscal policy is the use of government revenue collection (mainly taxes) and expenditure (spending) to monitor and influence a nation's economy. Monetary policy is the process by which the monetary authority of a country, typically the central bank or currency board, controls either the cost of very short-term borrowing or the money supply, often targeting inflation rate or interest rate to ensure price stability and general trust in the currency. This article is for folks who are interested in economics, especially about how monetary and fiscal policy will work differently in the future. The posts from the MMT Primer series have been collected and organized into Randy's latest book, *Modern Money Theory*. It makes for a much more coherent read and is highly recommended for anyone seriously interested in the MMT perspective.
