

# **Download Normal Infant Development And Borderline Deviations : Early Diagnosis And Therapy**

Attachment theory is a psychological model attempting to describe the dynamics of long-term and short-term interpersonal relationships between humans. The Cystic Fibrosis Foundation convened a group of experts in July 2007 to create guidelines for the management of infants with CF, many of whom are detected through newborn screening (NBS). 2 NBS identifies infants at risk for CF by screening for hypertrypsinogenemia. Introduction. Touch is one of the most essential elements of human development, a profound method of communication, a critical component of the health and growth of infants, and a powerful healing force (Bowlby, 1952; Harlow, 1971, 1986; Barnett, 2005). 3.1. Central and peripheral nervous system Several reviews on the neurological presentation of CDG-Ia have been published , , . Psychomotor development is usually delayed in CDG-Ia patients and this becomes evident in the first months of life.
